BONAFIDE CERTIFICATE

This is to certify that this Summer Internship project report **"AI Career & Placement Mentor"** is the Bonafide work of **DEEPAK RAJ E (810023104025)** has satisfactorily completed the course of **CS3711 – SUMMER INTERNSHIP** for **SEVENTH** semester, **COMPUTER SCIENCE AND ENGINEERING** during the academic year **2026-2027.**

Faculty Incharge **Head of the Department**

Submitted for the practical examination held on _____.

ABSTRACT

The AI Career & Placement Mentor is an Artificial Intelligence based project developed during my internship at Fantasy Solution, Tiruchirappalli. The project focuses on building an intelligent mentor that guides engineering students in choosing a suitable career path and preparing for campus placements. It analyses a student's profile and resume, recommends suitable job roles, identifies missing skills, suggests a personalised learning roadmap, and provides mock interview practice and conversational guidance.

The project follows a structured AI development approach consisting of Problem Definition, Data Collection, Data Preprocessing, Module Development, Integration, Testing, and Documentation. Requirement analysis and a study of existing career guidance platforms were used to understand common problems such as generic advice, lack of personalisation, and the absence of feedback on resumes and interview answers. Based on the findings, a skill and job-role dataset, a resume analysis module, a career recommendation module, a skill-gap analysis module, an AI mentor chat module, and a mock interview module were developed.

Python was the primary programming language. Natural Language Processing techniques were used to extract skills and key information from resumes, machine learning and similarity-based techniques were used to match skills with job roles and to calculate a placement readiness score, and a Large Language Model was used to provide natural, conversational mentoring. The application includes the Login and Registration, Profile, Resume Analyzer, Career Recommendation, Skill Gap Analysis, AI Mentor Chat, Mock Interview, and Placement Readiness Dashboard modules.

Functional, AI-module, and usability tests were carried out on the application. The results indicated that the system gave relevant and understandable career guidance, reduced the effort needed to prepare for placements, and worked consistently across modules. The internship provided practical exposure to professional AI project workflows and strengthened my skills in Python programming, NLP, machine learning, problem solving, testing, documentation, and presentation.

1.INTRODUCTION

An internship is an essential part of professional education because it connects academic learning with real-world industrial practice. During the internship at Fantasy Solution, Tiruchirappalli, I worked in the Artificial Intelligence domain and developed a project named AI Career & Placement Mentor. Many students are unsure which career path suits them, which skills they lack, and how to prepare for placement drives. The project focused on using AI to give every student personalised, practical, and easy-to-understand career and placement guidance. The work was carried out in Python and followed a structured AI project development methodology.

The project included requirement analysis, a study of existing platforms, dataset preparation, data preprocessing, resume analysis using NLP, career role recommendation, skill-gap analysis, conversational mentoring using a language model, mock interview practice, integration, and testing.

1.1 OBJECTIVES OF THE INTERNSHIP

- To understand the professional workflow followed in AI and software projects.
- To learn the fundamentals of Artificial Intelligence, Machine Learning, and Natural Language Processing.
- To perform requirement analysis and study existing career guidance platforms.
- To prepare and pre-process datasets for skills and job roles.
- To develop AI modules for resume analysis, career recommendation, and skill-gap analysis.
- To build a conversational AI mentor and a mock interview module.
- To improve problem-solving, teamwork, communication, and documentation skills.

1.2 SCOPE OF THE PROJECT

The scope of the AI Career & Placement Mentor includes building an intelligent assistant that supports students across the major stages of career preparation. The application enables students to register or log in, create a profile with their education, skills, and interests, upload a resume for automatic analysis, receive recommendations for suitable job roles, view the skills they still need to learn, follow a personalised learning roadmap, ask career and placement questions to an AI mentor, practise mock interviews, and track their placement readiness.

The project focuses on the AI and application logic that provide the guidance rather than on large-scale deployment or hardware. It covers the process from requirement analysis and data preparation to module development, integration, and testing. The system is intended to be simple for students to use and easy to extend with new job roles, skills, and question banks.

1.3 PROJECT OBJECTIVES

- Analyse student profiles and resumes automatically.
- Recommend job roles that match a student’s skills and interests.
- Identify skill gaps and suggest a clear learning roadmap.
- Provide a conversational mentor that answers career and placement queries.
- Offer mock interview and aptitude practice with useful feedback.
- Present the placement readiness of a student in a simple and measurable way.
- Build a modular system that can be extended and maintained easily.

1.4 BENEFITS OF THE INTERNSHIP

- Practical exposure to industry-oriented AI project development.
- Hands-on experience with Python, NLP, and machine learning techniques.
- Better understanding of data preparation, model behaviour, and evaluation.
- Experience in documenting a complete project and project report.
- Improved communication, presentation, teamwork, and problem-solving skills.

1.5 DEVELOPMENT APPROACH

The AI Career & Placement Mentor project follows a structured approach in which every module is connected to a student need identified during requirement analysis. The process begins with understanding the problem and the available data, continues through data preparation and module development, and then moves into integration, testing, and documentation.

Stage	Purpose
Problem Definition	Understand student needs and define the career guidance problem clearly.
Data Collection	Collect job-role, skill, and question data required by the modules.
Data Preprocessing	Clean, normalise, and structure text and data for AI processing.
Module Development	Develop the NLP, recommendation, analysis, and mentor modules.
Integration	Connect all modules into one application with a simple interface.
Testing	Evaluate functionality, AI output quality, and usability.
Documentation	Prepare the project report and present the results.

1.6 INTERNSHIP OUTCOME

The internship strengthened my practical understanding of Artificial Intelligence and gave me experience in converting a real-world problem into a working intelligent system. The AI Career & Placement Mentor project improved my confidence in Python programming and in applying NLP and machine learning techniques, and in presenting the work through documentation, testing, and results.

1.7 TECHNOLOGIES AND TOOLS

Technology / Tool	Purpose
Python	Core programming language for all modules and AI logic.
NLP libraries	Text extraction, tokenisation, and skill extraction from resumes.
Machine learning libraries	Skill matching, role recommendation, and readiness score calculation.
Large Language Model (LLM)	Conversational mentoring, interview feedback, and explanations.
Web interface framework	User interface through which students use the application.
Data files / database	Storage of job roles, skills, question banks, and student progress.

Python was the primary development language. Its rich ecosystem of libraries supported text processing, machine learning, and rapid prototyping of each module.

2.COMPANY PROFILE

2.1 ABOUT THE COMPANY

Fantasy Solution is a software solutions and training company located in Tiruchirappalli, Tamil Nadu. The company provides software development, project-based training, and internship opportunities for students and young professionals. It follows industry-standard practices and encourages interns to work on real-time projects under the guidance of experienced trainers.

2.2 VISION

To become a leading software solutions and training company by delivering innovative, reliable, and high-quality services that enhance customer satisfaction and learner growth.

2.3 MISSION

- To develop high-quality software solutions.
- To provide practical, industry-oriented training to students.
- To adopt modern technologies such as Artificial Intelligence in software development.
- To encourage innovation and continuous learning.
- To deliver excellent customer service.

2.4 SERVICES OFFERED

Fantasy Solution provides the following services:

- Software Development
- Web Application Development
- Artificial Intelligence and Machine Learning Projects
- Project Training and Internships
- Technical Training
- Software Testing
- Software Maintenance and Support

2.5 ORGANIZATION STRUCTURE

The organization follows a structured hierarchy to ensure smooth project execution and effective teamwork.

- Managing Director
- Project Manager
- Team Lead
- Software Developers
- Project Trainers
- Quality Assurance (QA) Engineers
- Interns

The internship was carried out under the guidance of Sona S (Project Trainer, Industrial Expert and Joint Supervisor) and other experienced professionals, which helped in understanding industry practices, teamwork, project planning, and professional communication.

3.DAILY WORK REPORT

The internship lasted for 26 working days from 1 June 2026 to 30 June 2026, during which I learned requirement analysis, data preparation, NLP, machine learning, AI application development, testing, and professional project documentation. The day-wise activities performed during the internship are presented below.

Day 1: Company orientation and introduction to the internship project, AI Career & Placement Mentor.

Day 2: Studied the project requirements and understood the objectives of the system.

Day 3: Studied the basics of Artificial Intelligence, Machine Learning, and Natural Language Processing.

Day 4: Studied existing career guidance and placement preparation platforms and identified their limitations.

Day 5: Collected requirements from students about career guidance, resume improvement, and interview preparation.

Day 6: Prepared the system architecture and the module-wise workflow of the application.

Day 7: Set up the Python development environment and installed the required libraries.

Day 8: Prepared the job-role and skill dataset covering common IT roles and their required skills.

Day 9: Cleaned and pre-processed the collected data using tokenisation, normalisation, and noise removal.

Day 10: Developed the user registration, login, and profile creation module.

Day 11: Developed the resume upload and text extraction feature.

Day 12: Implemented skill extraction from resumes using NLP techniques.

Day 13: Implemented resume scoring and improvement suggestions.

Day 14: Developed the career role recommendation module using skill-matching techniques.

Day 15: Developed the skill-gap analysis module to compare current skills with the skills required for a target role.

Day 16: Created the personalised learning roadmap generator.

Day 17: Integrated the AI mentor chat module for career and placement queries.

Day 18: Designed the prompts and response rules to keep mentor answers relevant, clear, and student-friendly.

Day 19: Developed the mock interview module with technical and HR questions and AI feedback.

Day 20: Developed aptitude practice questions and answer evaluation.

Day 21: Developed the placement readiness score and progress dashboard.

Day 22: Designed the user interface and connected all modules into a single application.

Day 23: Performed functional testing of all modules.

Day 24: Tested the AI modules with different sample resumes and queries and fixed the issues found.

Day 25: Conducted usability testing with fellow students and improved the interface based on feedback.

Day 26: Prepared the project documentation, presented the project, and received feedback from the internship mentor.

4.BLOCK DIAGRAM

The following block diagram represents the working flow of the AI Career & Placement Mentor, that is, the steps followed by the system while guiding a student. It helps in understanding how the modules are connected.

STUDENT LOGIN / REGISTRATION

↓

CREATE PROFILE (EDUCATION, SKILLS, INTERESTS)

↓

UPLOAD RESUME

↓

RESUME PARSING AND SKILL EXTRACTION (NLP)

↓

JOB ROLE MATCHING AND CAREER RECOMMENDATION

↓

SKILL GAP ANALYSIS

↓

PERSONALISED LEARNING ROADMAP

↓

AI MENTOR CHAT / MOCK INTERVIEW PRACTICE

↓

AI FEEDBACK AND PLACEMENT READINESS SCORE

Benefits of System Flow

- Improves understanding of the system.
- Shows how each module depends on the previous one.
- Makes testing of each stage easier.
- Helps developers extend the application.

5.AI CAREER & PLACEMENT MENTOR

5.1 EXISTING SYSTEM

In many institutions and online platforms, career guidance is general and not tailored to the individual student. Students must use separate tools for resume checking, skill learning, and interview practice, and they rarely receive meaningful feedback.

- Career advice is generic and not personalised.
- Resume feedback is limited or unavailable.
- Students are unaware of the skills required for their target roles.
- Interview practice lacks instant, useful feedback.
- Separate tools are needed for guidance, practice, and tracking.
- Progress towards placement readiness is difficult to measure.

5.2 PROPOSED SYSTEM

The AI Career & Placement Mentor aims to provide a single intelligent platform for career guidance and placement preparation by dividing the student journey into clear and understandable stages.

- Student profile creation with education, skills, and interests.
- Automatic resume analysis with skill extraction and improvement tips.
- Job role recommendations based on skills and interests.
- Skill-gap analysis with a personalised learning roadmap.
- AI mentor chat for career and placement queries.
- Mock interview and aptitude practice with instant feedback.
- Placement readiness score and progress tracking.

5.3 PROPOSED SYSTEM – DESIGN CHARACTERISTICS

Area	Approach
Input	Profile form and resume upload (PDF / DOCX) with simple validation.
Resume Analysis	NLP-based extraction of skills, education, and projects with a resume score.
Recommendation	Matching of student skills with job-role skill sets to rank suitable roles.
Skill Gap	Comparison of current and required skills with a step-by-step roadmap.
Mentoring	LLM-based chat with controlled prompts for relevant career answers.
Practice	Mock interview and aptitude questions with AI-generated feedback.
Progress	Placement readiness score and dashboard for tracking improvement.

5.4 CAPABILITIES

- Student registration, login, and profile management.
- Resume upload and automatic analysis.
- Skill extraction and resume improvement suggestions.
- Job role recommendation based on skills and interests.
- Skill-gap analysis and personalised learning roadmap.
- Conversational AI mentor for career and placement queries.
- Mock interview practice with feedback.
- Placement readiness score and progress dashboard.

6.PROPOSED METHOD

6.1 REQUIREMENT ANALYSIS

Requirement analysis is the process of understanding user needs, system expectations, and problems before building an application. It ensures that the AI modules solve real problems of students. For the AI Career & Placement Mentor, requirements were gathered to understand how students prepare for placements and what difficulties they face.

Analysis Methods

- Discussion with the mentor and fellow students
- Study of existing career guidance platforms
- Review of common job-role skill requirements
- Observation of typical placement preparation practices

Key Requirements

- Students want guidance specific to their own skills and interests.
- Students want clear feedback on their resumes.
- Students need to know which skills to learn for a target role.
- Students want realistic interview practice with feedback.
- The system should be simple, fast, and easy to use.
- The AI answers should be relevant, clear, and responsible.

6.2 DATA COLLECTION AND PREPROCESSING

Data is the foundation of every AI module. The system needs structured information about job roles, required skills, and interview questions, and it must be able to process unstructured text such as resumes.

Data Used

- Job roles and their required skill sets
- Skill vocabulary with common alternative names
- Technical and HR interview question banks
- Aptitude practice questions
- Sample resumes for testing

Preprocessing Steps

- Text extraction from PDF and DOCX resumes
- Conversion to lowercase and removal of noise and special characters
- Tokenisation and stop-word removal
- Normalisation of skill names (for example, “ML” to “Machine Learning”)
- Structuring the cleaned data into a consistent format

6.3 NLP AND MACHINE LEARNING TECHNIQUES

The AI modules use a combination of Natural Language Processing, similarity-based machine learning, and a Large Language Model. Each technique is used where it gives the clearest and most reliable result.

Techniques Used

- Tokenisation and keyword extraction for resumes
- Skill matching against the skill vocabulary
- Text similarity to compare student skills with job-role requirements
- Score-based evaluation for placement readiness
- Large Language Model for conversational mentoring and interview feedback

Advantages

- Accurate extraction of skills from unstructured text.
- Personalised and explainable recommendations.
- Natural, student-friendly conversation.
- Easy to update with new roles and skills.

6.4 SYSTEM ARCHITECTURE

The system is organised into layers so that each part can be developed, tested, and improved independently. The architecture of the AI Career & Placement Mentor includes:

Architecture Layers

- User Interface Layer – profile forms, resume upload, chat, and dashboard
- Application Layer – login, session handling, and module control
- AI Layer – NLP, matching, recommendation, and language model modules
- Data Layer – job roles, skills, question banks, and student progress

Main Modules

- Login and Registration
- Profile Management
- Resume Analyzer
- Career Recommendation
- Skill Gap Analysis
- AI Mentor Chat
- Mock Interview
- Placement Readiness Dashboard

Benefits

- Maintains modularity.
- Simplifies testing and debugging.
- Allows new features to be added easily.
- Supports future deployment.

6.5 AI MENTOR DESIGN

The AI mentor is the conversational part of the system. It answers career and placement questions and gives feedback on interview answers. Its behaviour is controlled so that responses stay relevant and helpful.

Design Principles

- Answers use the student's profile and skills as context.
- Responses are short, clear, and actionable.
- The mentor stays focused on career, skills, and placement topics.
- Feedback is encouraging and suggests specific improvements.
- The mentor avoids making guarantees about jobs or salaries.

Advantages

- Personalised guidance at any time.
- Reduces dependence on manual counselling.
- Consistent quality of advice.

6.6 INTEGRATION AND PROTOTYPE

After the individual modules were tested, they were integrated into a single working application with a simple interface so that a student can move from profile creation to readiness tracking without leaving the system.

Prototype Features

- Profile and resume upload
- Resume analysis report
- Role recommendations and skill-gap view
- AI mentor chat and mock interview
- Readiness score dashboard

Advantages

- Helps evaluate the complete user journey.
- Identifies issues between modules early.
- Provides a realistic preview of the final system.
- Supports future development and deployment.

7.ALGORITHM

7.1 STUDENT LOGIN AND PROFILE

- Student opens the application and the login page is shown.
- Student enters the login details, or registers as a new user.
- The system validates the entered details.
- On successful login, the student's profile page is opened.
- The student enters education details, skills, interests, and the target role.
- The profile is saved for use by the other modules.

7.2 RESUME ANALYSIS

- Student uploads the resume in PDF or DOCX format.
- The system extracts the text from the file.
- The text is cleaned and tokenised.
- Skills, education, and project details are identified using NLP.
- A resume score is calculated and improvement suggestions are generated.

7.3 CAREER RECOMMENDATION

- The student's skills and interests are compared with the skill set of each job role.
- A similarity score is calculated for every role.
- The roles are ranked from the best match to the lowest.
- The top roles are shown to the student with a short explanation.

7.4 SKILL GAP ANALYSIS AND ROADMAP

- The student selects a target job role.
- The required skills of the role are compared with the student's skills.
- Missing skills are identified and prioritised.
- A step-by-step learning roadmap is generated for the missing skills.

7.5 MENTOR CHAT AND MOCK INTERVIEW

- The student asks a career question or starts a mock interview.
- The system prepares the request using the student's profile as context.
- The language model generates the answer, the next question, or feedback.
- The response is checked for relevance and shown to the student.
- For interviews, the answers are scored and a summary is displayed.

7.6 PLACEMENT READINESS SCORE

- Scores from the resume, skills, practice tests, and mock interviews are collected.
- Each score is weighted and combined into one readiness score.
- The score and the areas to improve are shown on the dashboard.
- The score is updated as the student continues to practise.

7.7 GENERAL ALGORITHM

Requirement → Data Collection → Preprocessing → Feature Extraction → Matching and Recommendation → Mentor Response Generation → Evaluation → Feedback → Refinement → Final Output

8.IMPLEMENTATION

8.1 LOGIN AND REGISTRATION MODULE

This module allows students to create an account and log in securely. It validates the entered details, manages the session, and opens the student's profile after a successful login.

8.2 PROFILE MODULE

The Profile Module collects the student's education details, skills, interests, and target job role. This information is stored and used as context by the recommendation, mentor, and interview modules.

8.3 RESUME ANALYZER MODULE

The Resume Analyzer accepts a resume file, extracts its text, and uses NLP to identify skills, education, and projects. It then calculates a resume score and displays clear suggestions for improvement.

8.4 CAREER RECOMMENDATION MODULE

This module compares the student's skills and interests with the required skills of each job role and ranks the roles by match score. The best matching roles are displayed with a short explanation.

8.5 SKILL GAP ANALYSIS MODULE

For the selected target role, this module lists the skills the student already has and the skills that are still missing. It then generates a prioritised, step-by-step learning roadmap.

8.6 AI MENTOR CHAT MODULE

The AI Mentor Chat allows students to ask questions about careers, skills, resumes, and placements. A language model produces personalised answers using the student's profile as context.

8.7 MOCK INTERVIEW MODULE

This module conducts technical and HR mock interviews. It asks questions, evaluates the student's answers, and gives feedback with suggestions to improve.

8.8 PLACEMENT READINESS DASHBOARD

The dashboard combines the resume score, skill coverage, practice results, and interview performance into a single placement readiness score and shows the student's progress over time.

9.SAMPLE OUTPUT

The following sample outputs are taken from the AI Career & Placement Mentor and demonstrate the working modules of the application developed during the internship.

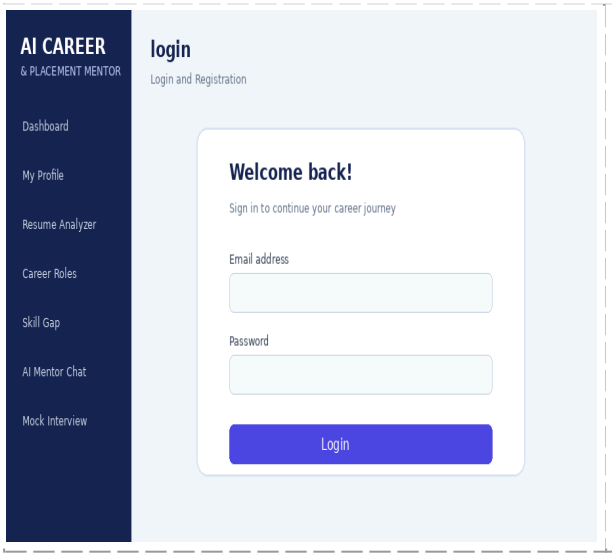

Figure 9.1 – Login and Registration Page

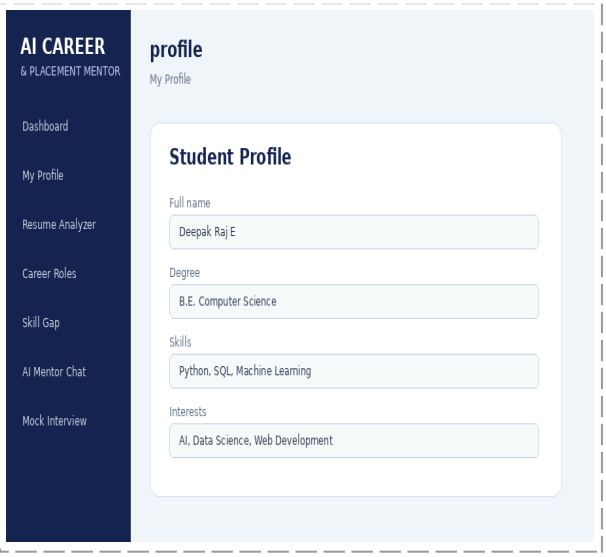

Figure 9.2 – Profile Page

Figure 9.3 – Resume Analysis Result

Figure 9.4 – Career Recommendation

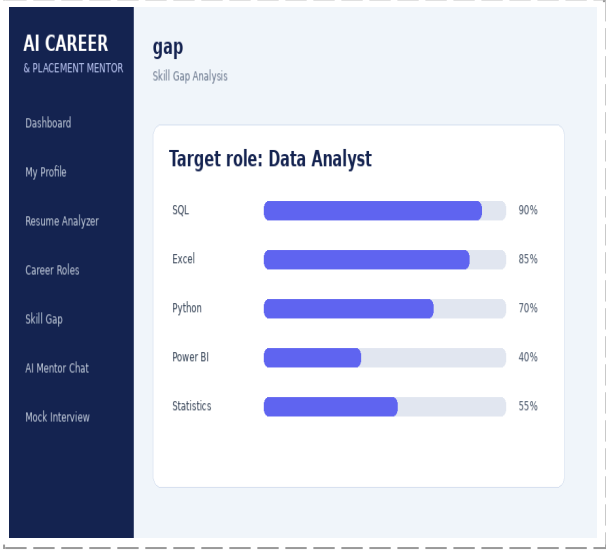

Figure 9.5 – Skill Gap Analysis and Roadmap

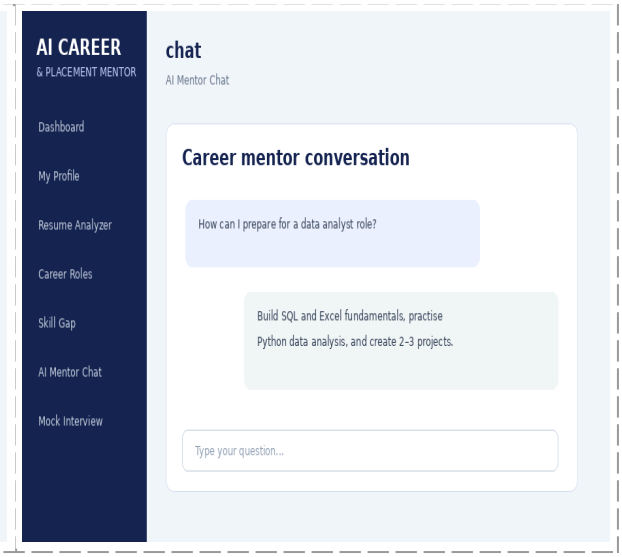

Figure 9.6 – AI Mentor Chat

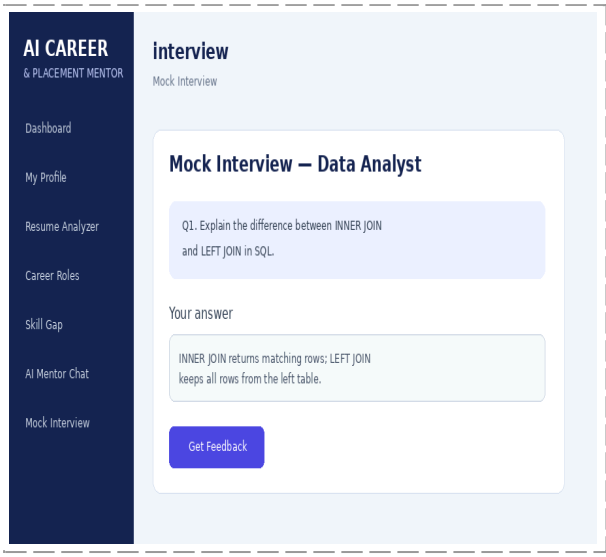

Figure 9.7 – Mock Interview

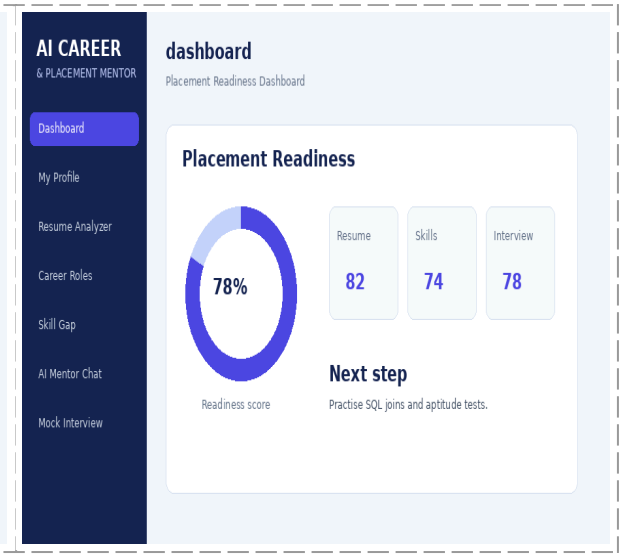

Figure 9.8 – Placement Readiness Dashboard

10.ANALYSIS

10.1 TESTING OVERVIEW

Testing is an important phase in the development process used to verify the quality, accuracy, and usability of the application. The AI Career & Placement Mentor was tested to ensure that every module works correctly, that the AI outputs are relevant, and that the application is easy to use.

10.2 FUNCTIONAL TESTING

Functional testing was performed to verify whether all modules work according to the requirements.

Tested Features

- Registration, login, and profile saving
- Resume upload and text extraction
- Skill extraction and resume scoring
- Career role recommendation
- Skill-gap analysis and roadmap generation
- AI mentor chat responses
- Mock interview flow and feedback
- Placement readiness score calculation

10.3 AI MODULE TESTING

AI module testing was conducted to check the quality and relevance of the outputs produced by the NLP, recommendation, and mentor modules using different sample resumes and queries.

AI Testing Includes

- Correct extraction of skills from different resume formats
- Relevance of recommended job roles
- Consistency of skill-gap results
- Relevance and clarity of mentor answers
- Handling of empty, short, or unrelated inputs

10.4 USABILITY TESTING

Usability testing was performed to evaluate the ease of use of the application.

Testing Objectives

- Check navigation between modules.
- Identify difficult or confusing steps.
- Improve the readability of results and feedback.
- Ensure a simple and effective interface.

10.5 TEST RESULTS

Test Area	Result
Login, Registration and Profile	Passed
Resume Analyzer	Passed
Career Recommendation	Passed
Skill Gap Analysis	Passed
AI Mentor Chat	Passed
Mock Interview	Passed
Placement Readiness Dashboard	Passed
Usability	Passed

11.CONCLUSION

11.1 LEARNING OUTCOMES

The internship at Fantasy Solution, Tiruchirappalli provided practical experience in Artificial Intelligence and real-time project development.

Skills Gained

- Python programming for AI applications
- Natural Language Processing and text processing
- Machine learning and similarity-based recommendation
- Use of language models for conversational applications
- Data preparation and testing of AI modules
- Professional communication and team collaboration

11.2 CONCLUSION

The internship provided valuable industrial exposure and helped me understand the complete life cycle of an AI project. The AI Career & Placement Mentor was successfully developed by applying NLP, machine learning, and conversational AI techniques to a real student need.

Through this internship, I gained practical knowledge in building intelligent, modular, and user-friendly applications. The experience improved my technical skills, problem-solving ability, and confidence in handling real-world software projects.

The AI Career & Placement Mentor brings resume analysis, career recommendation, skill-gap analysis, conversational mentoring, and mock interview practice into one platform. By applying structured data preparation, modular development, and repeated testing, the project delivered a system that gives students clear and personalised guidance. The application can now serve as a base for further development and wider use.

Key Outcomes of the Project

- Eight working modules covering the student journey from profile creation to readiness tracking.
- An NLP-based resume analyser that extracts skills and suggests improvements.
- A role recommendation and skill-gap module with a personalised learning roadmap.
- A conversational AI mentor and a mock interview module with feedback.
- Complete project documentation prepared for future development.

12.FUTURE WORK

The future enhancements of the AI Career & Placement Mentor include:

- Integration with live job portals and company-specific requirements.
- Voice-based mock interviews.
- Company-wise placement preparation plans.
- Multi-language support, including Tamil.
- Coding practice with automatic evaluation.
- A dashboard for placement officers to track student readiness.
- Improved models trained on larger and more diverse datasets.
- A mobile application version of the mentor.

These enhancements will extend the AI Career & Placement Mentor from an internship project into a complete, data-driven placement support platform for students and institutions.

University College Of Engineering,
Bharathidasan Institute of Technology (BIT) Campus,
Tiruchirappalli - 620 024.

Dear Deepak Raj,

Sub: Internship

On behalf of **FANTASY SOLUTION**. We would like to inform you that you have been accepted as one of our interns. We are pleased to inform you that you have been accepted as per the company requirements for the internship with **ARTIFICIAL INTELLIGENCE**.

Your internship wil l begin from **01st June 2026 to 30th June 2026**. You would assign to various tasks which relates to the project assigned to you after whom your performance would be assessed and appraised.
